

Using AI Tools at Work: Policies & Best Practices

Overview

Artificial intelligence tools such as generative AI assistants, coding copilots, and AI-powered analytics platforms are now part of our standard toolkit. This guide explains what tools are approved, how to use them responsibly, and what data you may and may not input into them. Following these guidelines protects both employees and the company.

Approved AI Tools

Currently approved tools include: Google Gemini (via Workspace), GitHub Copilot (for engineering teams), Notion AI (for documentation), and Otter.ai (for meeting transcription with consent). All other AI tools require IT and Legal approval before use with company data. Personal AI accounts (e.g., ChatGPT free tier) must not be used for company work.

What Data Can Be Entered into AI Tools

You MAY input: publicly available information, anonymized data, your own draft documents, and general business process questions. You MUST NOT input: customer PII, financial projections, unreleased product plans, source code marked confidential, legal documents, or employee personal data. When in doubt, ask your manager or email security@company.com before proceeding.

AI Output Review Requirements

All AI-generated content used in official communications, reports, or code must be reviewed and verified by the employee before submission. AI can hallucinate facts, misinterpret context, or produce biased output. You are responsible for the accuracy of any content you submit, regardless of how it was generated. Do not cite AI as a source in external documents.

Intellectual Property

Content generated using company-approved AI tools during work hours is considered company intellectual property. Do not share proprietary AI-generated content externally without approval. If you use AI to assist with a patentable invention, disclose this to the IP team immediately. The legal landscape for AI-generated IP is evolving - stay updated via the Legal team's quarterly briefings.

Bias & Fairness

AI tools can reflect biases present in their training data. Do not use AI tools to make or inform hiring, promotion, or performance decisions. Do not use AI to evaluate or rank employees. If you observe biased output from an approved tool, report it to the AI Ethics team at ai-ethics@company.com. We conduct bi-annual audits of AI tool outputs for bias.

Training & Support

Monthly 'AI at Work' lunch-and-learn sessions are open to all employees. On-demand tutorials are available in the Learning Portal under 'AI Literacy'. The #ai-tools Slack channel is monitored by our AI Champions team for questions. If you discover a more efficient use of an approved AI tool, share it in #ai-tools - great ideas get featured in our monthly AI Newsletter.
